OFFICE365 HEALTH CHECK

Office365 is a great service, enabling people to work in new ways and get more done on the move. A **cloud rollout** is not always that simple though, and not all Microsoft partners know as much about deploying cloud services as they claim. So, if you have moved to Office365, but are experiencing **performance problems** – how do you pin down where those problems lie and who is responsible for getting them **fixed**?

BrightCloud is a **Microsoft Enablement Partner**, specialising in troubleshooting & network infrastructure optimisation for Office 365.

Our **Office365 Health Checks** look at your applications, your network infrastructure, your AD/ADFS deployment & even your end-user device configuration. We'll deliver a report on our findings and help you troubleshoot the problems quickly and efficiently.

Office 365

HAPPY USERS | BETTER BUSINESS

People deserve to be happy with the way technology helps them work. BrightCloud are helping customers do business better, by delivering great application performance to happy users.

We have experts in these 4 sectors: **Small Medium Enterprise (SME), Public Sector, Not for Profit & Independent Software Vendors (ISVs).**

Call today and **do business better**.

WHAT DO WE COVER?

If you have specific areas of concern we'll tailor the process to suit you, but our tried and tested method usually includes:

> Monitor **application performance** & response times

>Monitor Internet **traffic**

> Capture & Assess **LAN & WAN traffic**

> **Active Directory** (AD) Health Check

> **ADFS** (Federation Services) & **DirSync** Health Check

> Check **Switches, Routers** & **Wireless** Access Points

Not moved to Office365 yet? Call about our Office365 Readiness Assessment.
