

OFFICE365 READINESS ASSESSMENT

So, you're planning to roll out **Office365**? Good call. Before you make the move, you must be certain that your network infrastructure can support this move. You need to be sure that your network is **ready** for a move to the public cloud and that's where we come in.

BrightCloud can give you independent advice before you start an Office365 project. Our **Readiness Assessment** will help you identify any areas of your network infrastructure which cause a risk to the performance of your new Office365 services. We can even demonstrate which existing applications are **cloud-ready** and which are not. You get a comprehensive report on our findings that highlights any areas needing attention, before you push the button and start the migration.

We are a **Microsoft Enablement Partner**, specialising in deployment services and network infrastructure for Office 365.

WHAT DO WE COVER?

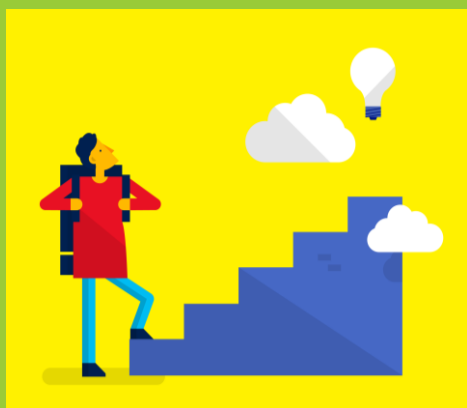

If you have specific areas of concern we'll tailor the assessment to suit you, but our standard method includes:

- > Monitor Internet **Bandwidth**
- > Check **Switches, Routers & Wireless** Access Points
- > Capture & Assess **LAN** traffic
- > Stress Test **WAN** links
- > **Active Directory (AD)** Health Check
- > Monitor **application performance** & response times
- > Locate **network errors**

If you're already on Office365 but have performance problems, call us about our **Office365 Health Checks**.

HAPPY USERS | BETTER BUSINESS

People deserve to be happy with the way technology helps them work. BrightCloud are helping customers do business better, by delivering great application performance to happy users.
